

State Cigarette Taxes

Increasing taxes on cigarettes is a winning solution for states. Higher taxes deter children from starting to smoke and motivate adults to quit. These taxes also raise revenue that can and should be used to fund tobacco prevention and cessation programs. Forty-six states, and the District of Columbia have raised their cigarette taxes since January 1, 2002, many of them more than once. See the map below for each state's cigarette tax rate as of June 15, 2010.

Action/Key Facts on Cigarette Taxes:

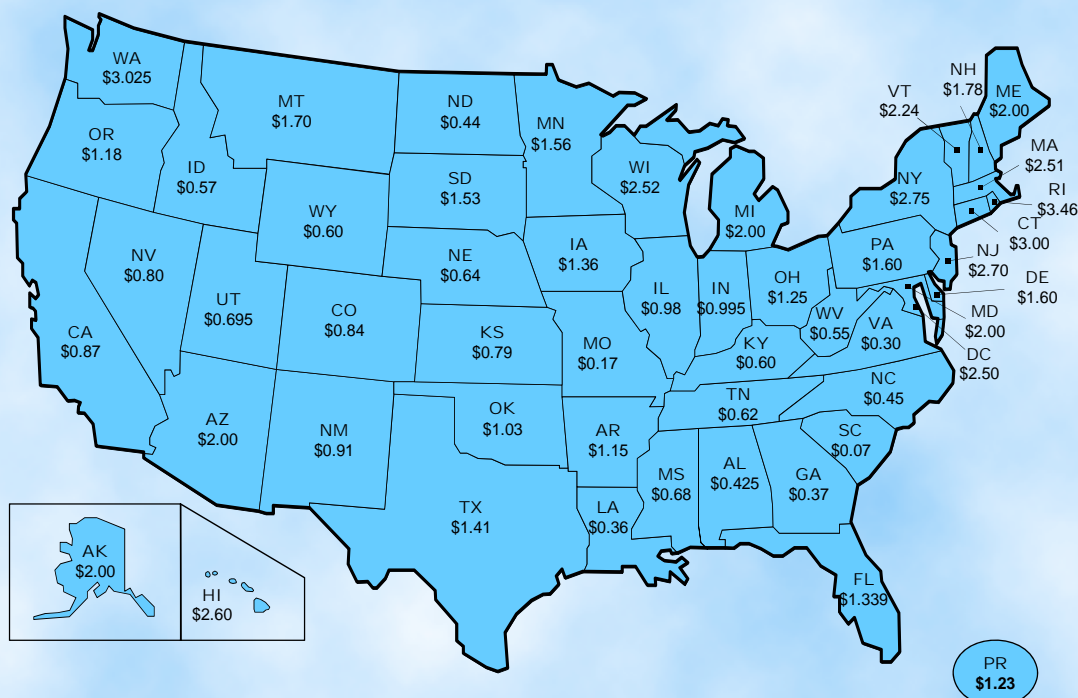

- In 2010, 5 states – Hawaii, New Mexico, South Carolina, Utah and Washington – have approved legislation increasing their cigarette taxes.
- The nationwide average state cigarette tax currently stands at \$1.36 per pack.
- Rhode Island now has the highest cigarette tax in the country at \$3.46 per pack, while South Carolina has the lowest at \$0.07 per pack.
- Connecticut, Rhode Island and Washington are the only states with tax rates at or over \$3.00 per pack; 11 other states – Alaska, Arizona, Hawaii, Maine, Maryland, Massachusetts, Michigan, New Jersey, New York, Vermont and Wisconsin – as well as the District of Columbia have tax rates at or over \$2.00 per pack.

Why Increasing Tobacco Taxes Are Important for Public Health:

- Studies have shown that a 10 percent increase in the price of cigarettes reduces consumption by about 7 percent for youth and 4 percent for adults.¹
- A 2007 report released by the prestigious Institute of Medicine entitled *Ending the Tobacco Problem: A Blueprint for the Nation* recommended increasing taxes as an effective tool to reduce tobacco use. Specific recommendations included increasing cigarette taxes to at least \$2.00 per pack, and indexing cigarette taxes to inflation.²
- An independent panel of scientists convened by the National Institutes of Health examined the evidence behind a number of interventions to reduce tobacco use in 2006, and concluded that increases in the price of tobacco products prevent tobacco use among adolescents and young adults, increases tobacco use cessation and reduces consumption of tobacco products by adults.³
- A 2002 study in the journal *Tobacco Control* examined tobacco industry documents related to cigarette tax increases, and found that the industry was well aware of the potent effect that increases in price have on reducing both youth and adult consumption of cigarettes.⁴

Map of Current State Excise Taxes on Cigarettes

as of June 15, 2010

Note: The federal excise tax on cigarettes is \$1.01 per pack.
